

**Barriers / Gaps:**

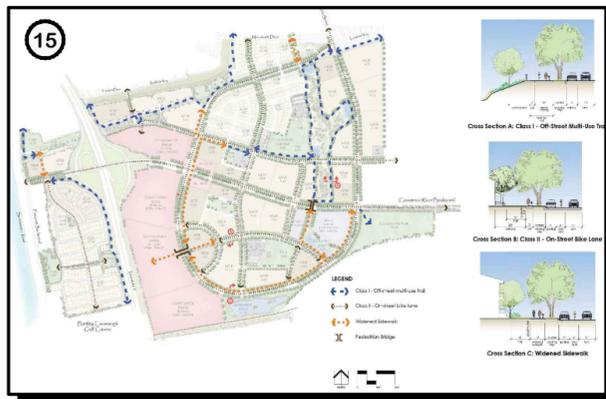

- No Class I Bike Trails
- The current parallel bike route along Freeport Blvd from Meadowview Rd to Fruitridge Rd is a high speed facility, designated as an expressway, formerly State Route 160.
- Current bike lanes are on narrow streets with a lot of commercial driveway access and traffic volumes making it intimidating for bicycle travel.

**Project Benefits:**

- Encourages active transportation by providing a separate bicycle/pedestrian facility, away from motorized vehicles
- Provides more direct access to vital neighborhood destinations such as local pharmacies, markets, schools, and parks. The trail is also a connection to major regional destinations such as the Sacramento Zoo, Land Park, Belle Cooleage Library, and Sacramento Executive Airport.
