Subject: Tree Ordinance CEQA Compliance

Hi Greg,

In a previous comment, I wrote that there needs to be a CEQA like evaluation regarding the potential environmental effect of the ordinance.

Now that I have thought about it, I believe there needs to be an official CEQA compliance. There may be an environmental effect of this project, i.e. adoption of the ordinance that needs to be analyzed under CEQA. The final ordinance could affect the tree canopy and density of our urban forest. This could have an effect on Sacramento's ability to deal with air quality, GHG and climate change, among other. The city needs to inform the public about these potential effects. If the city does not believe there will be effects, then that needs to be made public.

Please include this email in the public comments and post it on the website.

Thank you,

Nancy Finch
