

The City of Sacramento, Department of Utilities and its construction contractors will soon begin construction for water meters in your area. We understand that this project can be disrupting, and we will work hard to minimize impacts.

METER LOCATION

The City and your Homeowners Association (HOA) worked together to evaluate the meter installation options for your development. Water meters will be installed at each of the development's water service connections that link the City lines to the development's private water distribution system. If you have questions, please contact your HOA representative.

PRE-CONSTRUCTION

The HOA will be notified two weeks, one week and again one day before construction begins. If you have questions, please contact your HOA representative.

CONSTRUCTION

The Contractor will work to minimize inconveniences, which could include increased dust and noise. In addition, the water will be temporarily turned off for up to four hours. You will always have access to your home during construction, but parking may be temporarily restricted to accommodate traffic and construction.

Typical construction work hours are weekdays from 7 a.m.– 6 p.m. and Saturdays from 8 a.m.– 5 p.m. When construction takes place, signs and other information will be labeled *Meters Matter* so that the project is easily recognizable.

POST-CONSTRUCTION

Following meter installations, residents may see crews restoring disturbed surfaces.

ADDITIONAL INFORMATION

Please visit www.MetersMatter.org for more information. If you have additional questions, call the meter information line: 916-808-5870 or e-mail: watermeter@cityofsacramento.org.
