

WHY A FATS, OILS AND GREASE PROGRAM

INTRODUCTION

Fats, oils and grease (FOG) cause serious problems in the sewer system. FOG sticks to the walls of the pipes when put down the drain. Over time, FOG can restrict the flow in a pipe until a sewer clog or overflow occurs. Clogs and overflows can create smelly, dirty messes – possibly damaging your business, property, profits, as well as the environment.

DON'T GET STUCK PAYING FINES AND CLEANUP COSTS

FOG blockages can cause sewer overflows into businesses, nearby homes or local waterways, potentially causing a loss of business. Overflows impacting public health, water ways and storm drains may result in expensive fines and cleanup costs. Preventing FOG from entering sewers can avoid these problems.

BENEFITS OF KEEPING FOG FROM GOING DOWN THE DRAIN

Preventing grease-related sewer blockages and overflows benefits your business, your pocketbook and the environment by:

- Avoiding expensive cleanup costs and penalties
- Avoiding the loss of business due to sewer backups
- Keeping the environment clean
