

## *Water Bottle Fish*

**What you will need:** Plastic water bottle, tissue paper, scissors, white glue, paint brush, and colored paper.

### **How to Make the pop bottle fish:**

1. Remove the label from the water bottle.
2. Hold the bottom of the bottle with one hand and grasp the bottle about two inches up from the bottom with the other hand. Twist the bottle like you would a balloon to make the tail fin. (See picture to the right)
3. Insert a pen or something long and skinny inside the bottle to punch out any areas that were dented in when you twisted the bottle.
4. Cut pieces of tissue paper into one-inch squares or irregular shapes.
5. Paint white glue on the bottle and stick the tissue paper squares on the glue to cover the entire bottle.
6. Cut fins from colored paper and glue to the fish to finish.
