Curbside Electric Vehicle Charging: Open Houses

Learn about proposed projects in your neighborhood

What is “curbside charging”? Curbside charging is on-street electric vehicle (EV) charging where an EV charger is placed in the public right-of-way, in a similar location to that of a parking meter, for example. EV chargers and their associated parking spaces can only be used by cars that are parked in the street and are plugged in to charge their vehicle.

Why it matters: EVs deliver a host of community benefits such as improving air quality and reducing greenhouse gas emissions. Therefore, the City of Sacramento is working to increase access and encourage residents and businesses to drive EVs. With a high concentration of employees and multi-family housing in the Central City, installing curbside EV chargers as a neighborhood asset can support a more diverse array of EV drivers and attract new customers for local businesses.

The City of Sacramento is hosting two open houses to discuss the projects, solicit feedback, and answer questions:

Thursday, September 19, 2019

5:00 – 7:00 pm

New City Hall, 915 I Street
Room CH1119

Friday, September 20, 2019

11:00 am – 1:00 pm

New City Hall, 915 I Street
Room CH1119
